Industry Forum

Join us to hear a panel of Barnes & Thornburg IP lawyers who practice in the life sciences and biotech industries review the considerations necessary to protect a company's innovations during the full life cycle of a life sciences or biotech product.

In their presentation, these practitioners will take a fictitious company through the development of a novel small molecule, and focus on both the very

basics of IP law and some of the latest developments the company should consider in the IP arena, which is nuanced and constantly changing.

They'll dive into inventorship, licensing and commercialization, patent procurement strategies and, yes, even ways to avoid or approach litigation. Collective decades of practice experience provide the foundation for our panelists to discuss how your company can identify issues you will need to navigate to protect your IP along the full innovation life cycle and getting to market, focusing on the do's and don'ts.

The webinar will feature a Q&A session. You may ask questions during the Q&A or submit them when you register.

Questions? [Email Lindsay Bostic](#) or call 317-231-7382.
